Output

Designed for customers needing a heavy-duty professional solution for slot punching ID cards. The IDSP-01 can be run as hard as you need.

**Input:** Manually fed 500 card hopper or optional removable magazines that can be loaded off-line.

**Tooling Design:** The tooling is based on long lasting tool steel and can punch or score the full face area of the card.

**Heavy Duty Punch Station:** The punch station is powered by a heavy-duty 750W servo motor that with built-in capacity for larger punching requirements.

**Scoring or Punching:** The tooling and punch station design can be used to punch or score cards accurately.

**Output:** Extended high-capacity shingling output with a capacity for 1000 cards allows one operator to run several machines. Shingling output also allows for many non-standard card shapes to be managed.

**Custom Tooling:** Order customized tooling to meet the needs of your project. Punch tooling is easily and quickly changed.
